Satisfaction Guaranteed
100% guaranteed satisfaction. We go above and beyond to make you happy with our service, and your satisfaction is our goal.

Reliable Delivery
Reliable and express delivery service national wide.

Great Customer Service
Constantly improving our services to make it easier for you to have a more enjoyable experience using our services

Trusted by Professionals
Working with the bests in the field of art and framing has made us an attractive choice for collectors, auctioneers and art enthusiasts

What is Giclée Printing

The word Giclée ("gee-clay"), is based on the French word gicler which means "to squirt or to spray" and was originally mentioned by printmaker Jack Duganne in 1991. Giclée printing is a fine art digital printing process using specialist archival pigment inks and acid-free papers; creating gallery-quality inkjet prints with excellent depth of colour, longevity and stability.

The print process involves squirting microscopic dots of pigment ink onto high quality fine art or photographic papers using sophisticated high-end inkjet printers with exceptional accuracy, wide tonal range and colour gamut.

Studies have shown that the vivid colours in Giclée Prints can last more than 200 years with tests by independent bodies such as Wilhelm Research and printer manufacturers such as Canon. This gives assurance to artists, photographers, collectors and art buyers of the high quality of these types of prints. Giclée printing is a type of inkjet printing – but importantly, not all inkjet prints are giclée prints. Giclée printing produces a product at a higher quality and with a much longer lifespan than a standard desktop inkjet printers.

Why Giclée?

- Has greater accuracy and depth of colour, ensuring faithful reproductions of originals. There are more vivid and saturated colours than C-Type or digital offset, due to the bright pigments used to make up the inks.
- A perfect solution for artists and photographers who do not wish to go to the expense of mass-producing their work using more commercial based printers but prefer to print on demand.
- Print on demand means a single artwork can be made available in many papers and finishes and at different sizes. There are a much greater number of papers to choose from, incorporating different weights, textures and whiteness.
- Better longevity; a giclée print will outlast other prints and technologies by up to six times. The numerous research done by the independent Wilhelm Research group provides supporting data and evidence for this claim.
- Once Framed, their longevity doubles and with a UV filtered glass multiplies which preserves the prints and maintains the vivid colours of image.
- Widely accepted by art buyers, galleries and museums as archival, collectable art pieces.
